

Public Health Preparedness and Situational Awareness Report: #2023:23

Reporting for the week ending 06/10/23 (MMWR Week #23)

June 16, 2023

The weekly Public Health Preparedness and Situational Awareness (PHPSA) Report provides a snapshot of disease throughout Maryland. This report looks for different types of illnesses or disease clusters which may warn of a larger public health issue, including the potential for a bioterrorism event.

Data is gathered from Maryland's Emergency Departments using the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). Additional data is compiled from the Centers for Disease Control and Prevention's (CDC's) Health Alert Network, the Maryland Department of Health Prevention and Health Promotion Administration, the Maryland Institute for Emergency Medical Services Systems (MIEMSS), the World Health Organization, the National Electronic Disease Surveillance System, and the Program for Monitoring Emerging Diseases (ProMED).

CURRENT HOMELAND SECURITY THREAT LEVELS

National:	No Active Alerts
Maryland:	Normal (MDEM status)

SYNDROMIC SURVEILLANCE REPORTS

ESSENCE (Electronic Surveillance System for the Early Notification of Community-based Epidemics): Graphical representation is provided for all syndromes (excluding the “Other” category; see Appendix 1) by Health and Medical Regions (See Appendix 2). Emergency Department chief complaint data is presented as rates per 100,000 residents using data from the 2010 census. Electronic Surveillance System for the Early Notification of Community-Based Epidemics (ESSENCE). Baltimore, MD: Maryland Department of Health; 2023.

Gastrointestinal Syndrome

There were four (4) Gastroenteritis/Foodborne outbreaks reported this week. one (1) outbreak of Gastroenteritis in an Assisted Living Facility (BMA), two (2) outbreaks of Gastroenteritis in Nursing Homes (Western), one (1) outbreak of Gastroenteritis/Foodborne in a Restaurant (BMA).

Gastrointestinal Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	13.28	14.69	16.09	10.18	12.95
Median Rate*	13.11	14.58	15.68	10.17	12.93

* Per 100,000 Residents

Respiratory Syndrome

There were seventeen (17) Respiratory Syndrome outbreaks reported this week. Three (3) outbreaks of COVID-19 in Assisted Living Facilities (BMA, Eastern), one (1) outbreak of COVID-19 in a Correctional Facility (BMA), one (1) outbreak of COVID-19 in a Group Home (BMA), nine (9) outbreaks of COVID-19 in Nursing Homes (BMA, NCR, Western), one (1) outbreak of COVID-19 in a School (BMA), one (1) outbreak of Influenza in an Assisted Living Facility (BMA), one (1) outbreak of Varicella in a Daycare (BMA).

Respiratory Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	12.86	14.88	15.68	10.07	12.93
Median Rate*	12.50	14.21	14.91	9.65	12.38

* Per 100,000 Residents

Fever Syndrome

There were no Fever Syndrome outbreaks reported this week.

Fever Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	3.11	3.91	4.18	2.99	3.51
Median Rate*	3.02	3.76	3.97	2.88	3.40

*Per 100,000 Residents

Localized Lesion Syndrome

There were no Localized Lesion Syndrome outbreaks reported this week.

Localized Lesion Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	1.16	1.57	1.86	0.83	1.27
Median Rate*	1.01	1.53	1.77	0.79	1.22

* Per 100,000 Residents

Rash Syndrome

There were two (2) Rash Syndrome outbreaks reported this week. Two (2) outbreaks of Hand Foot and Mouth in a Daycare (BMA, Western).

Rash Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	1.11	1.48	1.57	0.87	1.22
Median Rate*	1.01	1.42	1.55	0.83	1.20

* Per 100,000 Residents

Neurological Syndrome

Neurological Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	0.89	1.11	1.04	0.72	0.94
Median Rate*	0.81	0.99	0.88	0.61	0.85

* Per 100,000 Residents

Severe Illness or Death Syndrome

Severe Illness or Death Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	0.69	0.86	0.88	0.57	0.73
Median Rate*	0.60	0.80	0.88	0.52	0.72

* Per 100,000 Residents

SYNDROMES RELATED TO CATEGORY A AGENTS

Botulism-like Syndrome

Botulism-like Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	0.09	0.15	0.08	0.11	0.13
Median Rate*	0.00	0.15	0.00	0.09	0.12

* Per 100,000 Residents

Hemorrhagic Illness Syndrome

Hemorrhagic Illness Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	0.06	0.18	0.05	0.17	0.16
Median Rate*	0.00	0.15	0.00	0.13	0.13

* Per 100,000 Residents

Lymphadenitis Syndrome

Lymphadenitis Syndrome Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	0.45	0.64	0.44	0.44	0.53
Median Rate*	0.40	0.62	0.44	0.39	0.55

* Per 100,000 Residents

Over-the-Counter Influenza-Related Medication Sales

OTC Medication Sales Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	3.00	3.71	2.31	6.91	4.77
Median Rate*	2.22	2.63	1.99	5.76	3.70

* Per 100,000 Residents

Over-the-Counter Thermometer Sales

Thermometer Sales Baseline Data January 1, 2010 - Present					
Health Region	1&2	3	4	5	Maryland
Mean Rate*	2.30	2.18	1.84	2.86	2.43
Median Rate*	2.02	2.12	1.55	2.88	2.49

* Per 100,000 Residents

PANDEMIC INFLUENZA UPDATE / AVIAN INFLUENZA-RELATED REPORTS

WHO update: The current WHO phase of pandemic alert for avian influenza is ALERT. Currently, the avian influenza H5N1 virus continues to circulate in poultry in some countries, especially in Asia and northeast Africa. This virus continues to cause sporadic human infections with some instances of limited human-to-human transmission among very close contacts. There has been no sustained human-to-human or community-level transmission identified thus far.

Influenza A (H7N9) is one of a subgroup of influenza viruses that normally circulate among birds. Until recently, this virus had not been seen in people. However, human infections have now been detected. Presently, there is limited information about the scope of the disease the virus causes and about the source of exposure. The disease is of concern because most patients have been severely ill. There is no indication thus far that it can be transmitted between people, but both animal-to-human and human-to-human routes of transmission are being actively investigated.

Alert phase: This is the phase when influenza caused by a new subtype has been identified in humans. Increased vigilance and careful risk assessment, at local, national, and global levels are characteristic of this phase. If the risk assessments indicate that the new virus is not developing into a pandemic strain, a de-escalation of activities towards those in the interpandemic phase may occur. Globally, from January 2003 to June 2023, there have been 873 cases of human infection with avian influenza A(H5N1) virus reported from 21 countries. Of these 873 cases, 458 were fatal. Thus, the case fatality rate for human H5N1 is approximately 52%.

AVIAN INFLUENZA

There were no relevant avian influenza reports this week.

HUMAN AVIAN INFLUENZA

AVIAN INFLUENZA, HUMAN (17): CHINA, 05 June 2023, The Centre for Health Protection (CHP) of the Department of Health is today (5 Jun [2023]) closely monitoring a human case of avian influenza A(H5N6) in the Mainland, and again urged the public to maintain strict personal, food, and environmental hygiene both locally and during travel. NATIONAL DISEASE REPORTS

KLEBSIELLA PNEUMONIAE - USA (03): (WASHINGTON): 09 June 2023, A hospital in Seattle has confirmed 2 more deaths in connection to a bacterial outbreak that began last year [2022]. Read More: <https://promedmail.org/promed-post/?id=8710497>

NOROVIRUS - USA (04): 06 June 2023, More than 175 people on board a cruise ship fell sick in a norovirus outbreak, according to the CDC. The government agency said that 152 of 2144 passengers on the Celebrity Summit ship, and 24 crew members reported becoming sick during its [15 May 2023] voyage. Read More: <https://promedmail.org/promed-post/?id=8710480>

SALMONELLOSIS - USA (05): (ILLINOIS): 06 June 2023, The Illinois Department of Public Health (IDPH) is working with local health departments, the CDC, and the Department of Agriculture's Food Safety and Inspection Service (USDA-FSIS), to investigate an outbreak of _Salmonella_ infections linked to ground beef. Read More: <https://promedmail.org/promed-post/?id=8710479>

INTERNATIONAL DISEASE REPORTS

RABIES (24): AUSTRALIA: 09 June 2023, Queensland Health recently reported the number of potential rabies exposures in returned travelers has increased in 2023, with 116 Queenslanders potentially exposed to the deadly virus this year. Read More: <https://promedmail.org/promed-post/?id=8710499>

BOTULISM - EUROPE (04): 08 June 2023, A large travel-associated outbreak of iatrogenic botulism in 4 European countries following intragastric botulinum neurotoxin injections for weight reduction, Türkiye, February to March 2023. Read More: <https://promedmail.org/promed-post/?id=8710481>

SYPHILIS, GONOCOCCAL DISEASE - UK: 08 June 2023, England saw a record number of gonorrhea cases and the highest level of syphilis in decades last year [2022] as sexually transmitted infections (STIs) spiked, the UK Health Security Agency [UKHSA] said on Tuesday [6 Jun 2023]. Read More: <https://promedmail.org/promed-post/?id=8710474>

TUBERCULOSIS - SPAIN: 06 June 2023, At least 19 cases of suspected tuberculosis have been detected in a school in Galicia, as confirmed by the Community's health authorities. The incident occurred among students in the 6th-form class [3rd or 4th year of high school in the United States or 16-18 years of age] of the IES [Institute of Secondary Education] Julio Prieto Nespereira school in the O Vinteún district of Ourense. Read More: <https://promedmail.org/promed-post/?id=8710466>

MEASLES UPDATE (26): AFRICA, 06 June 2023, The NICD has tested 6193 serum samples for measles since epidemiological week 40, 2022 [week ending 8 Oct 2022], of which 1034 (17%) were confirmed positive, all from outbreak-affected provinces. Read More: <https://promedmail.org/promed-post/?id=8710457>

NOTE: This weekly review is a compilation of data from various surveillance systems, interpreted with a focus on a potential BT event. It is not meant to be inclusive of all epidemiology data available, nor is it meant to imply that every activity reported is a definitive BT event. International reports of outbreaks due to organisms on the CDC Critical Biological Agent list will also be reported. While not "secure", please handle this information in a professional manner. Please feel free to distribute within your organization, as you feel appropriate, to other professional staff involved in emergency preparedness and infection control.

For questions about the content of this review or if you have received this and do not wish to receive these weekly notices, please e-mail us. If you have information that is pertinent to this notification process, please send it to us to be included in the routine report.
